To Whom It May Concern:

This letter is a recommendation for the Cleanroom design services of Abbie Gregg, Inc. We believe AGI's designs are the most practical to build, result in the best finish quality and are at the cutting edge of today's available technology.

As Cleanroom contractors, we see a lot of 1980's designs that keep getting repeated which don't work very well, are not contractor or user friendly and are harder to install and maintain due to too many parts and pieces and old technology. AGI projects suffer none of these problems. The communication and cooperation with AGI is, and always has been, excellent which also results in a better project.

There is always the temptation to "go cheap" and redesign or "VE" around a construction company's comfort zone or lowest bid. I admire AGI for sticking to their guns with the specifications and product selection, allowing for a high quality, easy to construct, robust Cleanroom system that will perform at or better than specified over many years to come. Our mutual clients/researchers at KAUST NanoFab, Harvard LISE, UMASS Lowell ETIC and others around the world know their Cleanrooms stay clean, are temperature controlled, easy to maintain, flexible, quiet and vibration free due to AGI's Cleanroom Designs and Construction support.

Please feel free to contact me if I can answer any questions about AGI.

Best Regards,

F.H. Chase, Inc.
